EDTC 710
Beta Test Response

Student #1:

This student recommended to add more visuals. I have made sure that there are pictures on every page visually depicting what the lesson is about. I feel that any more pictures will crowd the site and be distracting.

Student #2:

This student recommended to add a home page button which I have now included calling it the unit overview. Even though the “Quadratic Unit” link at the topic brings the used back to the home page it isn’t as clear. This student also recommended allowing the students to complete the Angry Birds project on their own at home. This is a project that we will be completing in class shortly. In order to work on this project, I, the teacher, have to run the program and guide the students through the assessment.

Teacher:

A colleague of mine reviewed my site and recommended adding navigation buttons at the end of each page in order to make it easier to move amongst the pages. I have since added these as well.

Overall, I think that my students and colleagues enjoyed using the site and found it helpful throughout the Quadratics unit. The videos are a great resource for the students to go back and review the lessons or learn them when they are absent. The extra practice listed through IXL and other activities also provide the students with more resources. The exit tickets provided invaluable feedback and helped to guide instruction as well.
